

Power plants can generate electricity from many different fuel sources, resulting in different emissions that impact the environment. LifeEnergy will report fuel sources and emissions to customers twice a year, allowing you to compare this electricity product with electricity products offered by other electricity suppliers. LifeEnergy is a member of the PJM regional transmission organization that coordinates the movement of wholesale electricity in all or parts of 13 states and the District of Columbia. The standardized environmental data shown below are regional averages only and was gathered by the PJM Generation Attribute Tracking System.

Sources of Electricity Supplied for the 12 months ending January 2019.	% of Total PEPCO (PJM)
Coal-Fired Power	28.13%
Natural gas-fired Power	31.72%
Nuclear Power	34.49%
Oil-Fired Power	0.16%
Renewable Energy Resources	
Biomass Power	0.00%
Solar Power	0.26%
Hydro Power	1.58%
Wind Power	2.60%
Captured Methane Gas	0.30%
Solid Waste	0.52%
Wood	0.21%
Renewable Energy Resources - SUBTOTAL	5.47%
TOTAL	100%

*Totals may not equal sum of components due to independent rounding.

Average Amounts of Emissions and Nuclear Waste per 1000 kilowatt-hours (kWh) Produced from Known Sources for the 12 months ending January 2019.	
Carbon Dioxide	915.85 lbs.
Nitrogen Oxides	0.51 lbs.
Sulfur Dioxide	0.70 lbs.
High-Level Nuclear Waste	Unknown
Low-Level Nuclear Waste	Unknown

This Environmental Disclosure Label is prepared and disturbed in accordance with the Maryland Public Service Commission’s Order No. 77666, 76241 (Case No. 8738).
